It is well known in the marketing and sales of products to have information about the product provided to consumers via direct mail, television advertisements, radio advertisements,

magazine advertisements, and the like. Such advertisements may be used to either promote a particular product or to provide information to a consumer about a particular product. It is also well known to provide information to consumers via kiosks or retail outlets where a consumer can access preselected information. With the advent of the internet, it is known for a consumer to search for particular products using a search engine and then view suggested items that have been found using the search engine. It is also known to provide consumers with information through cellular telephones and global positioning system (GPS) devices. Specifically, it is known for a cellular telephone to receive a telephone number from an associated business, to dial the telephone number and provide a consumer with a telephone number at which the business can be contacted. It is also known for a cellular telephone to receive a map of a particular geographic location, and to provide a consumer with a map

corresponding to the particular geographic location. It is further known for a GPS device to receive a set of instructions and a list of telephone numbers and geographic locations, and to provide a consumer with a telephone number and a geographic location corresponding to a set of instructions. The above systems and methods are known to provide consumers with information about a particular product or location. However, there is a need for more effective and efficient systems and methods for providing consumers with information about a particular product or location.1. Field of the Invention The present invention generally relates to an information processing device, a program, and a communication method. More specifically, the present invention is directed to an information processing device, a program, and a communication method
